

Time	<b>3:45-6:15 PM</b>
TITLE	<b>Rethinking and Reclaiming Data</b>
Short abstract for ICC website	Mapping requires data, in whatever form or format. However, data always represents situated knowledge and should be considered in the context of its origin, which can be shaped, amongst others, by (neo)colonialism, exclusion and discrimination. Through interactive activities and discussions, we will explore approaches to rethinking and reclaiming data. Although this is a stand-alone event, participation in the previous session "What is Our Narrative?" will be beneficial to our discussion. If possible, bring your laptop!
